

REMARKS

Claims 1-5, 8, 9, and 15 remain in the application and claims 1, 3, 5, 8, 9, and 15 have been amended hereby. Claims 6, 7, 10-13, and 16-19 have been canceled, without prejudice or disclaimer, and claims 20 and 21 have been added.

Reconsideration is respectfully requested of the rejection of claims 1-13 and 15 under 35 USC 102(b), as being anticipated by Starr.

Claims 6, 7, and 10-13 have been canceled, thereby rendering the rejection thereof moot.

Features of the display interface for a terminal according to the present invention are the selection of a view for specifying a node and a way for displaying an image and data associated with the node on a display screen, and generating another view based on the selected view. An advantage of these features of the present invention is that the view is not statically present and it can be dynamically generated based on a past history of views carried out by the user. See the paragraph bridging pages 11 and 12 of the present application, for example.

Independent claims 1 and 15 have been amended in part to recite the above-noted features of the present invention.

Looking at Starr we see that it is silent about specifying a structure (e.g. a tree structure) for defining how each node is viewed, and no other view is generated based on a selected view. The system of Starr is merely an electronic records management

7217/66541
system for entering and reviewing data about a patient using a graphical user interface.

Accordingly, it is respectfully submitted that amended independent claims 1 and 15, and the claims depending therefrom, are not anticipated by Starr.

Claims 16-19 have been canceled, thereby rendering the rejection thereof moot.

The prior art made of record and not relied upon has been reviewed and is not seen to show or suggest the present invention as recited in the amended claims.

Favorable reconsideration is earnestly solicited.

Respectfully submitted,
COOPER & DUNHAM LLP

Jay H. Maioli
